DETAILED ACTION

1. Applicant's response filed on 01/02/2004 has been fully considered. The claim objection has been withdrawn in view of Applicant's amendment.
2. Claim 1 is amended, and thus claims 1-12 are pending.

Claim Rejections - 35 USC § 102

3. Claims 1-9 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Otouma et al. (US 4,780,356).

Otouma discloses an ink jet recording sheet comprising a paper, an intermediate layer on the paper, and an overlayer containing porous particles (claim 1). The overlayer comprises particles having two particle size ranges, i.e., the first particle size is 0.1-50 um (claim 1) and the second particle size is 0.1-20 um (claim 8). The content of the particle having the second particle size is less than 70%, which falls within the claimed range of claim 2. The intermediate layer comprises particles that do not absorb ink, wherein the particles have a particle size of 0.05-200 um (claim 9). The particle in the overlayer is alumina (claim 5). The particle in the intermediate layer is silica-alumina (equivalent to the claimed cationically modified silica (col. 7, line 50)).

Response to Arguments

4. Applicant's argument is based on that the prior art does not include two particle size distributions, and does not include the claimed small particle sizes. The arguments

Art Unit: 1774

are not persuasive because the prior art teaches the two particles size distributions-0.1-50 um and less than 70% of 0.1-20 um. The first particle size distribution (0.1-50 um) is equivalent to the claimed particle size distribution (A), and it includes 100 nm. The second particle size distribution (0.1-20 um) is equivalent to the claimed particle size distribution (B), and it includes 1,000-3,000 nm. Therefore, the claimed invention reads on the reference.

For the above reason claims 1-9 and 12 stand rejected.

Allowable Subject Matter

5. Claims 10 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Otouma neither teaches nor suggests having a layer containing crosslinking agent disposed between the intermediate layer and the overlayer.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 1774

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
